

Nigerian Cassava Starch: Scalable Food-Grade and Industrial-Grade Supply for Global Buyers

Global manufacturers, processors and commodity importers are increasingly diversifying agricultural supply chains, seeking alternative origins and developing long-term relationships with suppliers capable of supporting substantial recurring volumes.

Nigeria offers a significant origin for cassava and cassava-derived products, supported by extensive cassava production and an established processing sector.

We are developing international supply programs for **Nigerian cassava starch in both food-grade and industrial-grade specifications**, targeting qualified importers, manufacturers, processors, distributors and industrial users.

Minimum supply requirement: 15,000 MT per month

Our focus is on **structured, recurring B2B supply programs**, rather than small spot transactions.

Nigerian Cassava Starch Supply

Origin: Nigeria

Product: Cassava Starch

Grades: Food Grade / Industrial Grade

Minimum Volume: 15,000 MT/month

Supply Program: Subject to confirmed production, quality and logistics capacity

Contract: Recurring monthly and long-term supply programs preferred

Market: International importers, manufacturers and industrial users

Technical specifications, packaging formats, quality documentation, logistics arrangements and commercial terms are established according to the requirements of each qualified buyer.

Food-Grade Cassava Starch

Food-grade cassava starch is suitable for a range of food-processing applications where controlled quality, consistency and functional performance are required.

Potential applications include:

- Food processing
- Bakery products
- Noodles and pasta
- Sauces and soups
- Confectionery
- Processed foods
- Starch-based ingredients
- Modified-starch production
- Other food and ingredient applications

For industrial-scale food buyers, procurement involves more than product price. **Consistent specifications, quality control, traceability, documentation and reliable shipment planning** are essential to establishing a sustainable supply relationship.

The final specification is therefore agreed with the buyer according to the intended application and destination-market requirements.

Industrial-Grade Cassava Starch

Industrial-grade cassava starch is used as a functional raw material across a broad range of manufacturing sectors.

Potential applications include:

- Paper and cardboard manufacturing
- Textile processing
- Pharmaceutical manufacturing
- Adhesives and industrial glues
- Corrugated packaging
- Industrial binders
- Starch-based and biodegradable materials

- Other technical and manufacturing applications

Application-Specific Viscosity

Industrial buyers do not necessarily require one universal starch specification. **Viscosity and other functional characteristics can be adapted to the technical requirements of each purchase contract and intended application, subject to production feasibility.**

For example, a buyer supplying the:

Paper industry may require a specific viscosity and functional performance for sizing, coating or binding.

Pharmaceutical industry may require a different specification suitable for its intended processing or excipient application and applicable regulatory requirements.

Textile industry may require viscosity and functional characteristics appropriate for textile sizing and finishing.

The same principle applies to adhesives, packaging and other industrial applications.

Accordingly, industrial buyers are encouraged to provide their **end use, target viscosity or pasting profile and other technical requirements** so that the supply specification can be evaluated and matched accordingly.

Why Consider Nigeria as an Alternative Cassava-Starch Origin?

For large international buyers, diversification can form part of a broader strategy to manage sourcing concentration, raw-material availability and procurement continuity.

A qualified Nigerian supply program can provide an additional origin for buyers seeking to:

Diversify Sourcing

Evaluate an additional geographic source alongside existing suppliers and origins.

Establish Recurring Procurement

Move beyond isolated spot purchases toward structured monthly supply arrangements.

Develop Alternative Supplier Relationships

Build a qualified supply relationship that can complement an existing international procurement network.

Strengthen Supply-Chain Flexibility

Maintain additional sourcing options as market conditions, availability and logistics requirements change.

For any new origin, however, **supplier verification, technical qualification, production assessment and logistics planning remain essential** before a long-term contract is established.

Built for Industrial-Scale Buyers

With a **minimum requirement of 15,000 MT/month**, this program is intended for organizations with the infrastructure and procurement capacity to handle substantial recurring volumes.

Qualified buyers should be able to demonstrate relevant:

- Importing capability
- Storage or processing infrastructure
- Port and logistics arrangements
- Technical and quality requirements
- Procurement organization
- Financial capacity
- End-use or distribution program
- Monthly consumption or sales requirements

This approach allows both parties to determine whether the proposed supply program is commercially and operationally suitable before detailed negotiations begin.

Buyer Qualification Information

Prospective buyers are invited to provide:

Company:

Country:

Website:

Required Grade: Food / Industrial

Monthly Quantity:

Annual Quantity:

Technical Specification:

Destination Port:

Preferred Incoterm:

Current Origin:

Current Supply Source:

Required Contract Duration:

Expected First Shipment:

End Use:

Procurement Contact:

This information enables a preliminary assessment of the buyer's requirements and the appropriate Nigerian supply structure.

From Buyer Qualification to Recurring Supply

Large-volume commodity programs require a structured process from initial inquiry through shipment.

1. Buyer Identification

We engage with established importers, manufacturers, processors, distributors and industrial procurement organizations.

2. Commercial Qualification

The buyer's company profile, required volume, destination, application and purchasing requirements are reviewed.

3. Technical Qualification

The required food-grade or industrial-grade specification is compared with the available Nigerian product specification and quality documentation.

For industrial applications, the technical review can include **application-specific viscosity and other functional parameters**.

4. Supply Verification

Production capacity, available export volumes, quality documentation and logistics capabilities are reviewed before progressing to a commercial offer.

5. Commercial Negotiation

The parties discuss volume, shipment schedule, Incoterms, destination, inspection requirements, payment structure and contract duration.

6. Contract and Shipment Program

For qualified buyers, the objective is to establish a **recurring monthly supply program** with clearly defined product specifications, shipment schedules and quality-control procedures.

From Nigerian Cassava Production to Global Industry

The opportunity extends beyond simply purchasing cassava starch from a new country.

A scalable export program requires coordination across the entire supply chain:

Farm Production → Aggregation → Processing → Quality Control → Documentation → Logistics → Export → International Buyer

This integrated approach is particularly important for buyers requiring substantial monthly volumes and consistent product specifications.

The objective is to develop supply programs capable of supporting **long-term international procurement**, rather than isolated commodity transactions.

15,000+ MT/Month Supply Programs

We are seeking discussions with qualified organizations requiring:

15,000+ MT/month

of:

Food-Grade Cassava Starch

and/or

Industrial-Grade Cassava Starch

Potential buyers include:

- Food manufacturers
- Food-ingredient companies
- Starch processors
- Paper manufacturers
- Pharmaceutical manufacturers
- Adhesive manufacturers
- Textile manufacturers
- Packaging companies
- Industrial distributors
- Commodity importers
- Large trading companies
- Other industrial users of cassava starch

Long-term and recurring supply programs are preferred.

Looking for Qualified Global Buyers

If your organization currently **imports, processes or consumes cassava starch at 15,000 MT/month or more**, we invite you to initiate a preliminary qualification discussion.

Please provide:

Company profile + required monthly volume + grade + technical specification + destination port + intended application + expected shipment schedule.

Following preliminary qualification, the relevant technical, quality, logistics and commercial documentation can be discussed.

Supply Program Summary

Origin: Nigeria

Product: Cassava Starch

Grades: Food Grade & Industrial Grade

Minimum Volume: 15,000 MT/month

Industrial Viscosity: Adaptable to agreed application and contract specification, subject to production feasibility

Contract: Recurring monthly and long-term programs preferred

Our Supply Approach

Verified origin

Defined specifications

Quality documentation

Application-specific industrial requirements

Structured logistics

Recurring supply programs
